re: Sampling Plan

Dear Ted:

This letter will confirm our telephone conversation of this afternoon in which I relayed to you my conversation with Scott Widness of GeoEngineers, our consultants for creation of the Lake Union Sampling Plan. At our last meeting, the company had agreed to pay sufficient monies to GeoEngineers and FishPro to complete the Sampling Plan for submittal to you no later than August 15, 1989.

The company did promptly remit payment to our consultants as we agreed. Nevertheless, the Sampling Plan will not be ready for submittal on the 15th as required. Scott called me this afternoon with an apology for this, explaining that GeoEngineers recent expansion to Portland had caused all kinds of confusion in their offices; settling in had taken more time than he had originally anticipated.

✓ Scott agreed to contact Greg Kellogg to explain the problem and indicated that the Plan would be ready for submittal by Monday, August 21st. By telephone this afternoon, you very kindly indicated that this would be acceptable to the EPA.

You also reminded me that we had promised to include in the Plan a schedule setting forth a realistic time line for the completion of the actual sampling as well as for production of the test results. By a copy of this letter to GeoEngineers, I am passing that reminder along.

Thank you for your patience and cooperation.

Sincerely,
UNITED MARINE SHIPBUILDING, INC.
